

Strongly object to the development plans. Most important reason , people living there will have multiple entrance and egress problems. Either end of Chalmers is a parking lot twice a day. This is a main reason other proposals have failed on the site. Additionally, this site when combined with South pond park and the surface water of South Geddes pond will provide almost 100 acres of contiguous park land with Oak treed rolling hills wetlands, natural pond and river for all citizens of A2 to explore. with NAP now located on the pond there is a vast educational opportunity to observe native ecology, to understand the systems in operation and to protect rather than denigrate the Huron.
