#### ANN ARBOR HISTORIC DISTRICT COMMISSION

#### **Staff Report**

ADDRESS: 113 W Washington Street, Application Number HDC21-298

- **DISTRICT:** Main Street Historic District
- **REPORT DATE:** December 9, 2021

**REPORT PREPARED BY:** Jill Thacher, Historic Preservation Coordinator

**REVIEW COMMITTEE DATE:** December 6, 2021

OWNER

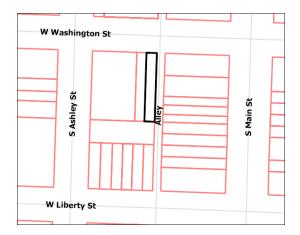

#### APPLICANT

| Name:    | 113 West Washington LLC | Ann Arbor Art Center |
|----------|-------------------------|----------------------|
| Address: | 113 West Washington     | 117 W Liberty Street |
|          | Ann Arbor, MI 48104     | Ann Arbor, MI 48104  |
| Phone:   | (734) 657-2096          | (734) 994-8004       |

**BACKGROUND:** The site is a public alley that runs between the east side of 113 East Washington and the rear of 200 South Main Street.

**LOCATION:** The site is located on the north side of West Washington, between South Main Street and South Ashley Street.

**APPLICATION:** The applicant seeks HDC approval to install nine banners that span the alley as part of a one-year public art installation.

#### **APPLICABLE REGULATIONS:**

#### From the Secretary of the Interior's Standards for Rehabilitation:

(2) The historic character of a property will be retained and preserved. The removal of distinctive materials or alteration of features, spaces, and spatial relationships that characterize a property will be avoided.

(10) New additions and adjacent or related new construction will be undertaken in such a manner that, if removed in the future, the essential form and integrity of the historic property will be unimpaired.

## From the Secretary of the Interior's Guidelines for Rehabilitating Historic Buildings: Building Site

<u>Recommended</u>: Designing new exterior additions to historic buildings or adjacent new construction which is compatible with the historic character of the site and which preserve the historic relationship between a building or buildings, landscape features, and open space.

<u>Not Recommended</u>: Introducing new construction onto the building site which is visually incompatible in terms of size, scale, design, materials, color and texture or which destroys historic relationships on the site.

#### Masonry

<u>Recommended</u>: Identifying, retaining, and preserving masonry features that are important in defining the overall historic character of the building such as walls, brackets, railings, cornices, window architraves, door pediments, steps, and columns; and details such as tooling and bonding patterns, coatings, and color.

<u>Not Recommended</u>: Removing or radically changing masonry features which are important in defining the overall historic character of the building so that, as a result, the character is diminished.

#### From the Ann Arbor Historic District Design Guidelines:

#### Signs

<u>Appropriate</u>: Attaching signage through masonry joints, not masonry units, or through materials that can be easily repaired, such as wood, when the signage is removed.

#### **STAFF FINDINGS:**

- 1. This application is for a public art installation in the alley between 113 West Washington and 200 South Main Street. Nine fabric banners are hung between the alley walls on a metal rod attached to brackets mounted on the building walls. The bottoms of the banners are mounted 15' above ground (to provide clearance for vehicles), and the banners are 4'3 7/8" tall. (Conceptual color renderings are included in the application please note that these are from a public art competition and are not to the scale proposed in this application.) There is a temporary art installation on the east wall of 113 West Washington that would presumably be removed. Signatures authorizing the application were provided from both of the property owners and the City of Ann Arbor, which owns the alley.
- 2. There is a red flag in a document in the application called Masonry Notes. It says:

Due to the irregularity in dimensions of the hand-pressed bricks and hand-laid masonry construction, the mortar joints between bricks range from ¼" to 5/8" wide. Therefore, anchoring within the mortar joints may cause more damage to the brick wall than anchoring

through the brickwork. Attempting to drill into thin mortar joints may cause damage to the edge conditions of the brickwork surrounding the drilling, while anchoring through the center of a face brick should not cause as much damage to the brick. When the anchors are removed, the center of the bricks can be easily patched with a mortar that can be tinted to blend into the surrounding masonry. We recommend that the contractor test the installation process of the anchors to determine which installation process will not harm the historic character and material of the walls. This can be completed during the anchor load testing (see note 3).

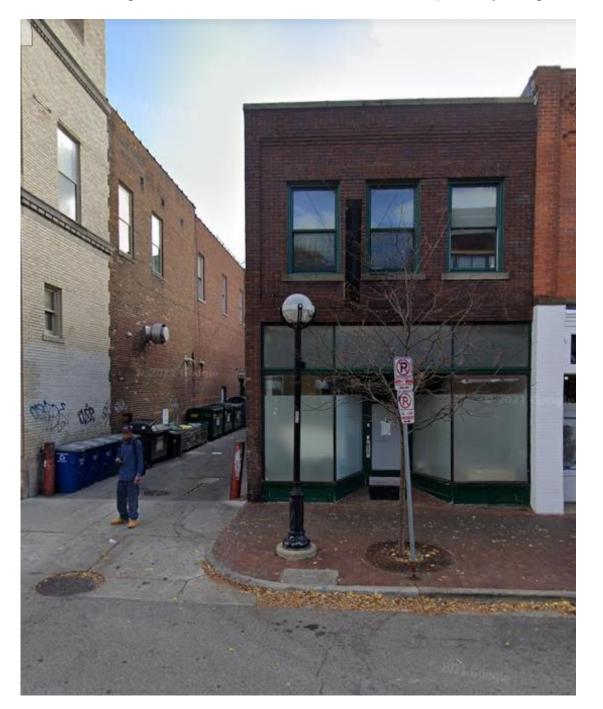

Proposing to drill through brick is not preserving masonry and not appropriate. If the mortar joints are too small, uneven, or otherwise unsuitable for this proposed project, or if the edges of bricks are endangered by the work, the project should not be installed.

**3.** Staff believes the work is inappropriate based on the proposed method of installing the steel brackets through bricks and should be denied. The Masonry Notes are clear that installing anchors in the masonry joints would likely damage the bricks; therefore, staff has not conditioned the motion on installation only in masonry joints.

**POSSIBLE MOTION:** (Note that the motion supports staff findings and is only a suggestion. The Review Committee, consisting of staff and at least two Commissioners, will meet with the applicant on site and then make a recommendation at the meeting.)

I move that the Commission issue a certificate of appropriateness for the application in the alley between 113 West Washington Street and 200 South Main, both contributing properties in the Main Street Historic District, to install nine banner rods on brackets mounted as described in mortar joints or masonry units. As proposed, the work is compatible in exterior design, arrangement, texture, material and relationship to the rest of the building and the surrounding area and meets *The Secretary of the Interior's Standards for Rehabilitation* and *Guidelines for Rehabilitating Historic Buildings,* in particular standards 2 and 10, and the guidelines for building sites and masonry, and the *Ann Arbor Historic District Design Guidelines.*

#### FOR COMMISSION REVIEWS:

- Application withdrawals made before public notice is published will qualify for a 50% refund of the application fee.
- Application withdrawals made after public notice is sent but before the public hearing will qualify for a 25% refund of the application fee.

#### INSTRUCTIONS FOR SUBMITTING APPLICATIONS

All HDC applications must be signed by the property owner and the applicant, if different, with the exception of staff approvals, which may be signed by only the applicant.

All completed HDC applications and their attachments may be submitted to Planning and Development Services by mail, in person (paper or digital), faxed, or via email to <u>building@a2gov.org</u>.

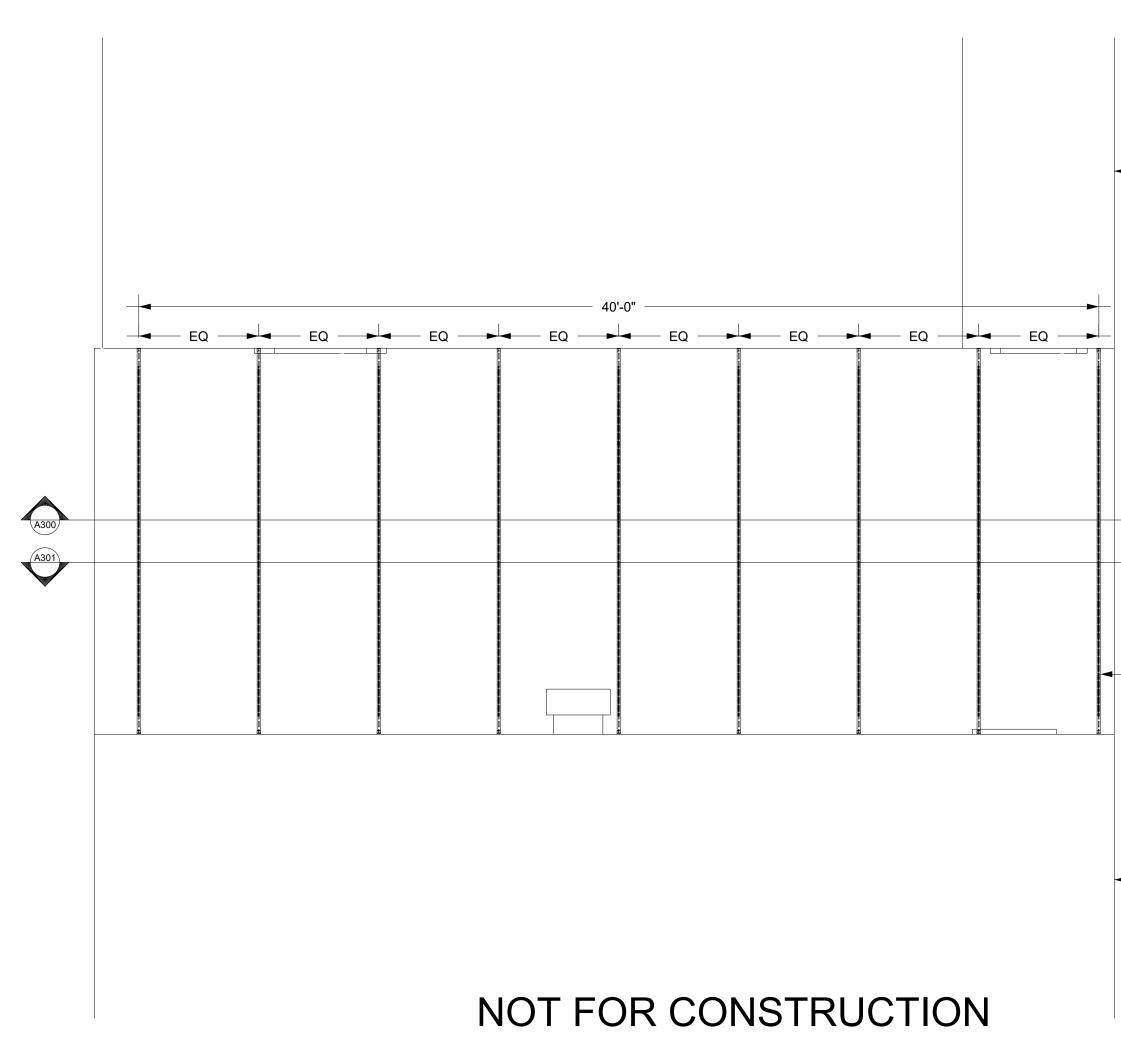

We accept CASH, CHECK, and all major credit cards. Checks should be made payable to "City of Ann Arbor"

HDC applications that are incomplete or not submitted with the required documentation or payment will not be processed or approved.

#### APPLICATION EXPIRATION

HDC applications expire three (3) years after the date of approval.

Masonry Notes:

- 1. Prior to installation, contractor (or client, owner, etc.) is to review state of masonry wall to determine suitability and conditions of wall for intended installation. Notify EOR, client, and building owner should conditions warrant repair.
- The masonry wall in which the artwork is to be installed is composed of hand-laid and hand-pressed bricks with a combination of traditional lime mortar and contemporary cementitious mortars. It is the intent of this project to install the artwork in a manner that is 1. reversible and 2. will not damage the appearance and stability of the wall.
- 3. Prior to installation, contractor is to identify the locations where anchors are to be installed in the wall. Contractor to review intended locations to determine whether localized areas require repair. Anchors shall not be installed in areas where mortar is missing or decomposed (resulting in a sand-like deposition), where mortar joints are opened (separated from the surrounding brickwork causing cavities) and where bricks are dislodged (movement is evident vertically and/or horizontally) or cracked.
- 4. The anchors chosen for installation are to be load tested in situ to determine capacity and suitability of installation in the masonry.
- 5. Due to the irregularity in dimensions of the hand-pressed bricks and hand-laid masonry construction, the mortar joints between bricks range from ¼" to 5/8" wide. Therefore, anchoring within the mortar joints may cause more damage to the brick wall than anchoring through the brickwork. Attempting to drill into thin mortar joints may cause damage to the edge conditions of the brickwork surrounding the drilling, while anchoring through the center of a face brick should not cause as much damage to the brick. When the anchors are removed, the center of the bricks can be easily patched with a mortar that can be tinted to blend into the surrounding masonry. We recommend that the contractor test the installation process of the anchors to determine which installation process will not harm the historic character and material of the walls. This can be completed during the anchor load testing (see note 3).
- 6. The weights on the installation and its ability to collect lateral loads (wind, etc.) need to be confirmed prior to construction/installation.
