SPECIFICATIONS

Project Summary

The City of Ann Arbor is looking for a single vendor to provide a LED video wall array for the City of Ann Arbor Traffic Operation Center (TOC). The bidder will supply the video wall cubes and associated pedestal support structure for the video wall array.

It is the intent of the City of Ann Arbor to purchase units of equal or better specifications listed below. The City's designated representative will review all alternate items submitted for consideration. Their decision as to acceptability will be deemed in the City of Ann Arbor's best interest and will be final.

Delivery

All items should be quoted FOB Destination, including inside delivery, uncartoning and setup ("white glove service") at the Ann Arbor TOC, located at 4251 Stone School Road, Ann Arbor, Michigan 48108. Setup location to be provided by the City prior to delivery.

Video Wall Cube Requirements

- The video wall shall consist of Mitsubishi Model VS-60HS12U 60-inch HD LED illuminated rear projection cubes, configured in a four cubes wide by two cubes high array. Each display cube shall provide resolution of 1,920 pixels horizontal by 1,080 pixels vertical. This shall create a viewable space of 210.4 inches wide by 59.1 inches tall and a total resolution of 7,680 pixels horizontal by 2,160 pixels vertical (with 5% over-scanning).
- The projection cube should have a contrast ratio of 1,000:1 or greater (typical).
- The screen must be a high brightness, black stripe screen.
- The projection cube shall have a lateral color shift of no more than 1.0 pixel (.75 for R, 1.0 for B).
- The projection cube shall use a 12-bit dither and gamma circuit.
- The projection cube shall use OSRAM red, green and blue LED's and shall not require color wheel.
- The projection cube must incorporate color space control, which will allow a technician to adjust Red, Green and Blue values for each of the primary and secondary colors Red, Green, Blue, Magenta, Yellow and Cyan.
- The projection cube shall have a digital gradation circuit and shall ensure a uniform display from screen edge to screen edge.
- The mullion size shall be 1mm to 2.5mm horizontally and vertically, depending on the size of the configuration. This variance allows for expansion due to heat and humidity.
- The video wall system shall utilize display technology DLP™ (0.65" DLP™ 1 chip)/ DarkChip3™/ BrilliantColor™ of Texas Instruments. Each chip shall have a native resolution of HD (1,920 x 1,080). The projection cube shall not utilize Smooth Picture or Wobulation.
- The automatic brightness and color system shall utilize three separate sensors for red, blue, and green to allow for more accurate color and brightness tracking.
- The video wall shall provide a mechanism to continually and automatically color balance itself, without external probes or technician interaction or an external PC/CPU.
- Each LED rear-projection cube must automatically communicate with the other rear projection cubes and must calibrate its own brightness level every 2 seconds or less to ensure that each cube in a video wall has the same brightness level.

- Each LED rear-projection cube shall be capable of three (3) Brightness Levels – Eco Mode, Normal Mode and Bright Mode to allow the user to select a level based on brightness, power consumption, and BTU output.
- The projection cube should produce a minimum of 280 cd/m² in Eco Brightness mode.
- The projection cube should produce a minimum of 560 cd/m² in Normal Brightness mode.
- The projection cube should produce a minimum of 700 cd/m², in Bright mode.
- The video wall system shall be rated for 24/7/365 operations for 60,000 Mean-Time Between Failure (MTBF) hours.
- Each projection cube LED Illumination unit shall have a life span of 60,000 hours in Eco Mode, Normal Mode or Bright Mode.
- The audio noise shall be 30dBA at 3 feet distance from the screen center.
- Each LED rear-projection cube shall utilize an air-cooled solution. Each LED rear-projection cube shall utilize variable speed cooling fans with a lifespan of 60,000 hours for longevity. Liquid-cooling has been deemed an unacceptable solution due to its instability, and low MTBF on expensive components.
- The projection cube must have internal heat sensors to monitor the internal temperature. The values shall be able to be monitored by a technician via remote control.
- Each LED rear-projection cube shall be accessible from the front. The video wall display shall be configured for easily accessible front access for maintenance and troubleshooting.
- Each LED rear-projection cube shall have a maximum depth of 20.5” and require only 2” of clearance.
- If one or more components are turned off (for troubleshooting or maintenance) the remaining displays of the video wall should continue to operate.
- The video wall shall have support for integrated or external power supplies.
- Each LED rear-projection cube shall be designed such that the light engine is enclosed and can be replaced in the same cabinet without having to install a new cabinet. This means that the display wall can be refreshed with new light engines at 60,000 hours.
- Each LED rear-projection cube shall possess a screen with a minimum ½ gain viewing angle of 35° Horizontal and 10° Vertical.
- Each LED rear-projection cube should be able to switch between High Brightness mode and Normal mode and ECO mode through the remote control or computer application interface without having to power the cube down or throw a mechanical switch.
- Each LED rear-projection cube shall have automatic on screen diagnostics that indicates display conditions. This on screen diagnostics should be easily viewable from any operator position. The projection cube should also have error codes viewable from the rear LED of the cube for further diagnostics.
- Each LED rear-projection cube shall have the capability for Electrical Geometry Adjustment that can be performed with remote control so that one technician can electronically adjust/align the geometry adjustments for each cube in the entire display wall.
- Each LED rear-projection cube shall have a built-in (no card) DVI-I input (Digital with HDCP, Analog).
- Each cube shall be IP addressable via built-in RJ45 connector. Each cube shall support control via RS-232C via a 9-pin D-Sub connector. Each cube shall support both wired and wireless remote control
- Each LED rear-projection cube shall be RoHS and WEEE compliant.

Video Wall Support Pedestal

- The bottom edge of the video wall array should start at 48 inches above the floor and be mounted on a pedestal compatible with the specified video wall cubes.
- The structure shall allow horizontal and vertical adjustments to be made to level the video wall.
- The structure shall be able to be mounted securely to the floor.
- The pedestal structure shall include cladding to conceal the support members.

FAIR EMPLOYMENT PRACTICE

The contractor, its agents or sub-contractors, shall comply with all requirements of Chapter 112 of Title IX of the Code of the City of Ann Arbor and in particular the following excerpts therefrom:

9:161 NONDISCRIMINATION BY CITY CONTRACTORS

- (1) All contractors proposing to do business with the City of Ann Arbor shall satisfy the nondiscrimination administrative policy adopted by the City Administrator in accordance with the guidelines of this section. All contractors shall receive approval from the Director prior to entering into a contract with the City, unless specifically exempted by administrative policy. All City contractors shall take affirmative action to insure that applicants are employed and that employees are treated during employment in a manner which provides equal employment opportunity and tends to eliminate inequality based upon race, national origin or sex.
- (2) Each prospective contractor shall submit to the City data showing current total employment by occupational category, sex and minority group. If, after verifying this data, the Director concludes that it indicates total minority and female employment commensurate with their availability within the contractor's labor recruitment area, i.e., the area from which the contractor can reasonably be expected to recruit, said contractor shall be accepted by the Director as having fulfilled affirmative action requirements for a period of one year at which time the Director shall conduct another review. Other contractors shall develop an affirmative action program in conjunction with the Director. Said program shall include specific goals and timetables for the hiring and promotion of minorities and females. Said goals shall reflect the availability of minorities and females within the contractor's labor recruitment area. In the case of construction contractors, the Director shall use for employment verification the labor recruitment area of the Ann Arbor-Ypsilanti standard metropolitan statistical area. Construction contractors determined to be in compliance shall be accepted by the Director as having fulfilled affirmative action requirements for a period of six (6) months at which time the Director shall conduct another review.
- (3) In hiring for construction projects, contractors shall make good faith efforts to employ local persons, so as to enhance the local economy.
- (4) All contracts shall include provisions through which the contractor agrees, in addition to any other applicable Federal or State labor laws:
 - (a) To set goals, in conference with the Human Resources Director, for each job category or division of the work force used in the completion of the City work;
 - (b) To provide periodic reports concerning the progress the contractor has made in meeting the affirmative action goals it has agreed to;
 - (c) To permit the Director access to all books, records and accounts pertaining to its employment practices for the purpose of determining compliance with the affirmative action requirements.
- (5) The Director shall monitor the compliance of each contractor with the nondiscrimination provisions of each contract. The Director shall develop

procedures and regulations consistent with the administrative policy adopted by the City Administrator for notice and enforcement of non-compliance. Such procedures and regulations shall include a provision for the posting of contractors not in compliance.

(6) All City contracts shall provide further that breach of the obligation not to discriminate shall be a material breach of the contract for which the City shall be entitled, at its option, to do any or all of the following:

- (a) To cancel, terminate, or suspend the contract in whole or part and/or refuse to make any required periodic payments under the contract;
- (b) Declare the contractor ineligible for the award of any future contracts with the City for a specified length of time;
- (c) To recover liquidated damages of a specified sum, said sum to be that percentage of the labor expenditure for the time period involved which would have accrued to minority group members had the affirmative action not been breached;
- (d) Impose for each day of non-compliance, liquidated damages of a specified sum, based upon the following schedule:

<u>Contract Amount</u>	<u>Assessed Damages Per Day of Non-Compliance</u>
\$ 10,000 - 24,999	\$ 25.00
25,000 - 99,999	50.00
100,000 - 199,999	100.00
200,000 - 499,999	150.00
500,000 - 1,499,999	200.00
1,500,000 - 2,999,999	250.00
3,000,000 - 4,999,999	300.00
5,000,000 - and above	500.00

(e) In addition the contractor shall be liable for any costs or expenses incurred by the City of Ann Arbor in obtaining from other sources the work and services to be rendered or performed or the goods or properties to be furnished or delivered to the City under this contract.
