Notes:

1. Tonnage data in this table is presented on a calendar year (January-December) basis and therefore tonnages will be different than presented at other times on a fiscal year (July-June) basis.
2. A small amount of organics are collected from commercial sources and included in the Residential sector organics tonnage. It cannot be segregated and reported under the Commercial sector because it is collected as part of residential routes.
3. Diversion Rate - Unadjusted is the sum of Recycling and Organics tonnage divided by the Total tonnage for the year.
4. Diversion Rate - Adjusted for Residue deducts 10.74% of the recycling tonnage from the weight of diverted material, based on audited recycling stream composition as of February 2018.
