Use [See Sec. 5.19.3 for Uses in D1 and D2 Downtown Districts:]	Required Parking Spaces	Required Bicycle Spaces	Required Bicycle Class	EV Occupancy duration	Required EV Charging Spaces (round up to next integer)	Justifications for EV Charging Requirements
Residential Uses						
						Update completed December 18, 2019 based on input from the Ordinance Revision Committee meeting. Previously updated 7/15 with category definitions and color coding) per WA and JM discussions. Do not make changes in the table; propose changes with by inserting comments!
					None	Proposed for uses where: - No parking is required; and/or - No EVs are expected to park > ~ 15', at least for the foreseeable future.
					100% EV-R	Proposed for uses, e.g. single family dwellings and similar overnight accessory uses, where: - Wiring is typically done without conduit (e.g. Romex) therefore EV-R makes more sense than EV-C; - Vehicles will likely be charged overnight / over an extended period of time as the primary means of charging by vehicle owners with no paid premium to a third-party charger owner; and - The initial installation cost is relatively low and where adding EV-readiness at a later date will be substantially more expensive.
					100% EV-C	Proposed for uses, e.g. residences, where: - EVs will likely be charged overnight / over an extended period as the primary means of charging by vehicle owners with no paid premium to a third-party charger owner; and - The initial installation cost is relatively low and where adding EV-readiness at a later time would be substantially more expensive.
					65% EV-C plus 25% EV-R plus 10% EV-I	Proposed for uses, e.g. multi-family dwellings and group living, where EVs will likely be charged overnight/ over an extended period. Revised on 12/17/12 based on feedback from Ordinance Revision Committee; 10% EV-I provides ready access to charging for residents vs. having to go through long petition process with the property owner

						50% EV-C plus 40% EV-R plus 10% EV-I	Proposed for uses, e.g. transit centers, where: - Likely users of the use site will be early EV adopters; - Users of the use site will leave their vehicles for several hours or more for charging; and - The initial installation cost is relatively low and where adding EV-readiness at a later time would be substantially more expensive.
						25% EV-C plus 15% EV-R plus 10% EV-I	Proposed for uses, e.g. schools and office buildings, where: - 6-8 hour parking duration is common; - A significant percentage of 'parkers' (esp. in A2) may have longer commuting distances and may have situations with limited or no charging capability and thus need to charge at work.
						15% EV-C plus 10% EV-R plus 10% EV-I	typical 'parkers' may not need charging capability but where employees will. Revised on 12/17/12 based on feedback from Ordinance Revision Committee; was 25% EV-C; this adds 10% EV-R and provides at least one EV-I available to customers / employees.
						10% EV-R plus 10% EV-I	Proposed for uses, e.g. retail, where: - Typical parkers will be short duration; and - A minimal level of charging readiness is provided for employees as well as for a potential change in use of the facility. Revised on 12/17/12 based on feedback from Ordinance Revision Committee; was 10% EV-C; this provides at least one EV-I available to customers / employees.
						25% EV-C plus 50% EV-R plus 25% EV-I	Proposed for uses, e.g. hotels and B&Bs, where: - Overnight stays are typical; - Guest are likely to be travelling long distances and will need over charging; and - Guests are likely to be more affluent and thus early EV adopters. Revised on 12/17/12 based on feedback from Ordinance Revision Committee; was 75% EV-R plus 25% EV-I; lowers cost for initial years when utilization likely to be low.
