Resolution to Approve the Purchase of a Combination Sewer Truck from Jack Doheny Supplies, Inc. - City of Rochester Hills and National Intergovernmental Purchasing Alliance Bid (\$441,535.30)
The attached resolution authorizes the purchase of a Vactor model 2115-PLUS combination sewer unit mounted on a 2014 Freightliner model 114 SD chassis from Jack Doheny Supplies, Inc. for a total purchase price of \$441,535.30.

A combination sewer truck is a piece of equipment that combines high pressure water and vacuum removal to clean sewers lines and excavate around underground utilities. The vacuum portion of the vehicle is used to hydro-excavate, which means to use vacuum along with pressurized water to remove soil. Hydro excavation is the safest way to dig around underground cables, curb boxes, and pipes because it removes the soil without damaging the underground structures. Additionally, the vacuum portion of the vehicle is frequently used to control water in an excavation during the repair of a water main break. This allows the water main to be kept pressurized to prevent contaminants seeping into the water system.

Currently, we have three Vactor brand combination sewer trucks. One truck for each of the three utility operations (sanitary sewer, water, and storm water)

This truck will replace a 2005 truck with 6685 hours of use. Over the last two years, this unit has been taken to Fleet Service for breakdown repairs 63 times. These breakdowns have taken the unit out of service from 4 hours to more than 2 weeks at a time.

These frequent break downs mean the vehicle is unavailable for use for water main break repairs. When this vehicle is not available, the Vactor used for the storm water system maintenance must be pulled from its operation.

This makes it impossible to stay current on the scheduled preventive maintenance of the storm water system. Cleaning of the storm water system is programmed or scheduled based on the operational

history of a segment of the system. A particular portion of the system or specific pipe is periodically cleaned, with the cleaning period being set at an interval shorter than historical time between backups. Failure to meet the cleaning schedule puts the system at risk for clogging and backing up into structures.

The City of Rochester Hills, acting as the Principal Procurement Agency along with the City of Ann Arbor, City of Troy and the National Intergovernmental Purchasing Alliance issued a Request for Proposal for the purchase of combination sewer truck(s), parts, and related services. The proposal was developed with the intent of procuring a sewer truck meeting the City's specifications, a contract that would offer a comprehensive list of parts and related services for sewer trucks, a nationwide master agreement for entities across the country to purchase from, and aggregated volume to generate best value offers from combination sewer truck vendors.

The proposal process consisted of two stages; proposal review and site visits/product demonstrations. Representatives of the City of Ann Arbor, City of Rochester Hills, City of Troy, and staff of the National Intergovernmental Purchasing Alliance evaluated proposals. By collaborating with a national cooperative, the City received the most competitive pricing available in the market. As part of this contract, the City was able to secure pricing that includes discounted parts pricing for multiple years, a complete selection of all available component, chassis, and engine offerings for the vehicle to ensure this cooperative contract would be beneficial and provide a solution to meet agencies needs across the nation.

Of the four responses that were received, only the top two were selected for the second stage of review. This stage included vendor presentations, facility tours, and demonstrations of their equipment.

Scoring for all phases of the proposal process where conducted and Jack Doheny Supplies, Inc. was selected with unanimously supported of all participants.

All of the City of Ann Arbors combination sewer trucks are Vactor brand which have interchangeable parts, which allows a substantial reduction in parts inventory.

Jack Doheny Supplies, Inc. is the sole representative of the Vactor brand in the State of Michigan and is the largest dealer of sewer equipment in the United States.

Adequate funds for this purchase are budgeted in the FY14 Field Operations, Water System Operation and Maintenance budget.

Jack Doheny Supplies, Inc. received Human Rights approval on September 5, 2013

Prepared by: Thomas A. Gibbons, Financial Analyst-Fleet and Facility Unit
