SECTION II - SCOPE OF SERVICES

GENERAL INFORMATION ON UTILITY

The City of Ann Arbor's Public Services Area (AAPSA) manages a municipal water utility that provides quality drinking water service and sanitary sewage disposal to a population of approximately 125,000 people within the city of Ann Arbor. AAPSA also provides sanitary service to portions of Ann Arbor, Pittsfield, and Scio Townships. The entire AAPSA service area covers about 43 square miles and continues to attract residential and commercial development.

The City's Sanitary Sewer Collection System is a network of approximately 365 miles of pipes that flow to the City's wastewater treatment plant on the east side of the City. The system pipe sizes range from 4-inch to 78-inch. The system includes 10,331 sanitary sewer manholes, 9 sanitary siphons, 7 lift stations, and 6,800 linear feet of force mains. The sanitary sewer system has over 22,000 residential sanitary sewer connections and over 5,000 commercial sanitary sewer connections.

The City has a full pipe hydraulic model comprised of over 10,000 pipes and 10,000 junctions. The hydraulic modeling software presently being used is InfoSWMM 14.7 (Innovyze/Autodesk) and City seeks to migrate the model to InfoWorks™ as part of this project. The model was last calibrated as part the 2015 Sanitary Sewer Wet Weather Evaluation (SSWWE) project (using flow data from 2013 monitoring period). The SSWWE project established a level of service design event based on input from a citizens advisory committee. The design event was a 25-year recurrence interval peak sanitary flow plus 10% additional peak flow for climate change and future growth.

SCOPE OF SERVICES

The consultant will be responsible for developing a comprehensive plan for the City's sanitary sewer collection system that includes two major sections: a technical plan and a policy and financial evaluation. The first section is the technical plan that will guide the city toward implementation of capacity improvements within the collection system to meet future development demand. The second section is a policy and financial evaluation that should incorporate the data collected during the technical study to guide city staff on how to develop and implement a sanitary sewer policy that meets the City Council's goals of equitable, sustainable, and affordable development.

The tasks listed below are not intended to comprise a complete list of tasks required for the project. The consultant shall submit a comprehensive and detailed scope of services required to complete the project.

TECHNICAL PLAN REQUIREMENTS

- 1) Recalibrate/update collection system hydraulic model.

- a. Utilize available flow meter data for establishing dry and wet weather conditions from:
 - i. Fifteen (15) ADS meters currently deployed throughout collection system as identified in the 2023 flow monitoring plan
 - ii. Available meter(s) at WWTP and outstations
 - iii. Available Township master meter(s)
 - b. Update hydraulic model for collection system from data extracted from GIS database (e.g., recent lining work, development extensions, etc.).
 - c. Migrate model to InfoWorks™ software.
 - d. Update hydraulic model with planned capital improvement projects as necessary for future conditions modeling scenario(s).
 - e. Utilize City's water meter billing data for determining flow allocation in upstream portions of local collection system as needed.
- 2) Perform hydraulic analysis of collection system and identify capacity constraints with recommendations to meet current and future demands. Future needs should look at next 10-year and 20-year planning periods. Consultant shall clearly distinguish any recommendations necessary to meet current demands from future development demands.
- a. Organizations to engage for future growth projections may include, but are not limited to, the University of Michigan, Ann Arbor Public Schools, City of Ann Arbor Planning Department, surrounding townships, Systems Planning, and the Office of Sustainability and Innovations (OSI) staff regarding climate adaptation goals.
 - b. Evaluate dry and wet weather conditions. The City's current design event is a 25-year recurrence interval peak sanitary flow plus 10% additional peak flow as identified in the 2015 Sanitary Sewer Wet Weather Evaluation Project. The intent for the 10% additional peak flow was to accommodate for climate change and/or future growth.
 - c. Compare the City's design event versus EGLE regulatory event on capacity constrained areas and identify where recommendations could be altered.
 - d. Future conditions shall align with recommendations from the City's Planning Department Comprehensive Land Use Plan. This will likely involve evaluating collection system impacts as a result of different land use scenarios that are to be considered as part of the City's Comprehensive Land Use Plan effort.
 - e. Include a collection system build out for township island areas located within the City of Ann Arbor.
- 3) Perform capacity assessment on the City's wastewater treatment plant and lift stations for future demand scenarios for dry and wet weather events.
- 4) Provide an implementation strategy for the recommended plan. This shall include estimated phasing and timing of needed improvements based on flow or capacity triggers depending on projected growth rates.
- 5) Conduct site investigations, as needed, to confirm information from existing reports and records.

- 6) Provide an overview of the hydraulic model, instructions, and the basis for how to make updates to the model for future use.
- 7) Recommend on-going flow monitoring plan to assist City with management of the sanitary sewer collection system. Plan shall consider permanent and short-term monitoring locations.
- 8) Identify low points in the system where SSO events or backups may be at high risk.
- 9) Identify areas with high rates of infiltration and inflow (I&I), including township connections. Provide analysis and recommend options for investigating and eliminating I&I sources.
- 10) Identify and review key bypass points in the collection system.
- 11) Delivered model shall at minimum include the following modeling scenarios:
 - a. Existing conditions (dry and wet weather)
 - b. Existing conditions with Township maximum contract flows
 - c. Scenario for sizing bypass pumping for construction projects
 - d. EGLE regulatory event for existing and future conditions
 - e. City's design event for existing and future conditions
 - f. The build out of the City's Future Land Use Map within the service area
- 12) Review of existing city/township wastewater service agreements. Make recommendations for updates/improvements.
 - a. Includes hydraulic analysis to ensure adequate collection system and plant capacity to service contract flow amounts.
 - b. Perform analysis of available capacity for future agreement opportunities.
 - c. Recommend strategies for limiting infiltration and inflow from township service connection locations.
- 13) Identify any present and future regulatory concerns for the collection system.
- 14) Provide training for up to four (4) city staff members on use of InfoWorks™ model.
- 15) Consultant shall include an initial engagement strategy indicating the level of engagement/information sharing they believe would be necessary for this type of project. Develop and implement a public engagement strategy in collaboration with city staff that includes at minimum:
 - a. Complete the City of Ann Arbor's Community Engagement Toolkit with city staff (estimate 2 hours)
 - b. In collaboration with the City, develop a stakeholder list of who needs to be invited to participate, who to reach with informational materials, and which methods will be used to reach them.
 - c. Develop education and outreach materials (digital, print, and/or social media materials) to reach a diverse audience about the project's process, outcomes, and potential impacts (such as language for website, social media updates, presentations). This material will include, at minimum, a video to be shared on the website and social media describing the project and its conclusions and recommendations.

- d. Provide website updates throughout the project that inform the community about the project's progress.
- e. Presentations to city council and commissions may be needed (up to 3 meetings total).

POLICY AND FINANCIAL EVALUATION

The purpose of this section is to determine how to use the data collected in the technical section to develop a policy to support new development infrastructure needs, while maintaining a high level of service, and keeping rates equitable for existing and future customers. The deliverables from this section will be foundational information for an anticipated capital cost recovery study.

- 1) Review and evaluate the effectiveness of the City's existing Capital Cost Recovery model and the Developer Offset Mitigation (DOM) Program.
 - a. As a part of the DOM review, provide recommendations for the current program and/or sustainable alternatives for incentivizing homeowners to disconnect private footing drains from the sanitary system.
- 2) Research policy options and funding strategies for providing sufficient long-term sanitary sewer capacity that align with the following:
 - a. The Comprehensive Land Use Plan and its core aspects of sustainability, affordability, and equity
 - b. Support increased residential and commercial density based on the City's land use goals
 - c. Comply with any financial or legal restrictions regarding rate payer fees versus fees for growth

The City reserves the right to reject any proposal that it determines to be unresponsive and deficient in any of the information requested for evaluation. A proposal with all the requested information does not guarantee the proposing firm to be a candidate for an interview. The committee may contact references to verify material submitted by the offerors.
2. The committee then will schedule interviews with the selected firms if necessary. The selected firms will be given the opportunity to discuss in more detail their qualifications, past experience, proposed work plan, and fee proposal.
3. The interview must include the project team members expected to complete a majority of work on the project, but no more than six members total. The interview shall consist of a presentation of up to thirty minutes (or the length provided by the committee) by the offeror, including the person who will be the project manager on this contract, followed by approximately thirty minutes of questions and answers. Audiovisual aids may be used during the oral interviews. The committee may record the oral interviews.
4. The firms interviewed will then be re-evaluated by the above criteria (A through D), and adjustments to scoring will be made as appropriate. After evaluation of the proposals, further negotiation with the selected firm may be pursued leading to the award of a contract by City Council, if suitable proposals are received.

The City reserves the right to waive the interview process and evaluate the offerors based on their proposals and fee schedules alone and open fee schedules before or prior to interviews.

The City will determine whether the final scope of the project to be negotiated will be entirely as described in this RFP, a portion of the scope, or a revised scope.

Work to be done under this contract is generally described through the detailed specifications and must be completed fully in accordance with the contract documents.

Any proposal that does not conform fully to these instructions may be rejected.
