Dear Ann Arbor Transportation Commission,

I hope you are doing well. I'm currently working on an article regarding the new traffic safety corridors in Ann Arbor as part of the Vision Zero initiative and have a few specific questions to help clarify and complete the information.

1. **Selection of Corridors:** Could you provide more details on the process used to identify the Washtenaw, Packard, and Jackson corridors? Were there any particular factors, aside from crash data, that played a role in their selection?
2. **Crash Data Specifics:** Can you share a summary of the crash data from 2019–2024 that highlighted the need for safety improvements in these corridors? For example, what types of crashes (speeding, distracted driving, pedestrian-related, etc.) were most prevalent?
3. **Public Engagement:** Has there been any community feedback or consultation with residents in the areas surrounding these corridors? If so, what were some of the key concerns or suggestions raised by the public?
4. **Monitoring and Evaluation:** How will the effectiveness of the safety corridors be monitored over time? Are there any specific metrics or goals for reducing crashes and injuries within these areas?
5. **Long-term Plans:** What are the next steps for expanding this initiative beyond the three identified corridors? Are there plans to create additional safety corridors in the future?

Your insights will help ensure that the article accurately represents the goals and strategies behind the initiative. Thank you for your time and assistance.

Best regards,

Emma Spring
