Subject: Support for developments that eschew gas hookups

Dear Planning Commission:

I have come to learn that University Inn at 2424 East Stadium, on your meeting agenda for August 3, will be an all-electric building. As a climate- and environmentally-concerned citizen, I would like to see development like this, especially on our public transit corridors. Please give this proposal every consideration at your August 3 meeting. And please support similar efforts in the future!

Please let the developers know that there is grassroots support for doing the right thing for the climate crisis and we applaud them for it.
