

Dear Planning Commission,

I am writing in strong opposition to the Nov 2015 South Pond Villages Site Plan that will be discussed at your public hearing on the subject on 2/17. This plan would significantly impact the natural area that many others and I are working to protect. This revised plan fails to solve the problems of sufficient access to the site, and creates new problems. This Nov Plan is in my view far worse than the April 2015 site plan which was vote down by Planning commission. The new site plan is worse than the former plan for many reasons:

1. The Nov. site plan impacts the natural features far more than the April plan. It is opposed by over 1000 signers of a petition to protect these wetlands that it would go through
2. The Nov Site plan leads to greatly increase traffic flow through the Woodcreek Neighborhood
3. It does not serve the needs of the new South Pond villages residents as well
4. It is opposed by Planning Staff
5. It is probably illegal

This is a long communication, but contains a lot of information that is relevant to your decision on this Site Plan.

We have heard a lot of words describe the problems that the South Pond Village development would impose on nearby residents. The NovSite plan that would put a road called South Pond Way to the North. This plan would significantly impact the wetlands that many others and I are working to protect. The idea was that this road might somehow solve traffic issues. I will show to you that unfortunately this damaging road would not significantly effect southbound traffic, but instead would route 85% of the traffic directly through the Woodcreek neighborhood. I wanted to talk about actual numbers to compare one plan against the other. The first number is 1038, that is the number of people who have signed a petition I started to urge the developer and Ann Arbor Planning Commission to protect these wetlands in part because of their natural beauty and because they serve as habitat to rare species including one particularly rare butterfly called the Dukes Skipper. I would ask council to read the names and the comments of the signers, most of which are Ann Arbor residents. Attached is a petition in favor of protecting this sensitive area. It is signed by 1038 Michigan residents; that's nearly enough to fill the power center.

Stanley Pollack for instance says: "Not every acre of land in our beautiful town was meant to be developed. Preserved this lovely area so that we can all enjoy the reason we choose to live here in the first place. This is one of the most lovely wetlands in Southern Michigan".

*Every very single one* of the signers I present to you today is a resident of Michigan and 72% of them live in Ann Arbor. Thus people who live here clearly want these wetlands to be preserved. I would ask Planning Commission to please at least glance over their heartfelt comments, which are attached.

A lot of people are also correctly worried that the new development will cause traffic problems; specifically increasing the congestion at the problematic Washtenaw and Chalmers intersection. Unfortunately, moving the road so that it goes north does not address this problem and does not improve emergency access.

The best access, in my view is the West (Chalmers) option, i.e. the extension of Woodcreek Blvd, as proposed by the April site plan. This is for two main reasons, it does not impact the wetlands, and it allows most of the South Pond Village traffic to essentially bypass the Woodcreek development by using the Woodcreek Blvd extension. The current plan completely opens up Algebe way to traffic, so most of the development generated traffic will now go *directly through* the Woodcreek neighborhood instead of using the Woodcreek Blvd extension. The only significant disadvantage of the West (Chalmers) option is that it does not increase the level of service of the Chalmers Washtenaw interchange but importantly according to a recent [traffic study](#), *neither does the Northern access route*. This is stated clearly in the conclusions of the latest traffic study page 25 "*The additional access (South Pond Way) to Huron River Drive will not relieve the congestion at the Washtenaw Avenue intersection with Chalmers Drive.*"

This is because 85% of people living in the development are expected to want to go South from the South Pond Village development toward Washtenaw not North toward East Huron River Dr simply because there are more destinations on Washtenaw to the South. Only a very few 15% would go north on South Pond Way through the wetlands impacting Northern access route. The recent [traffic study](#), shows that the proposed road will be maximally used by only 8-13 drivers/hr in the morning and afternoon "rush". These few would have been easily accommodated on Chalmers which gets very very

light traffic north of Woodcreek Blvd. Please look at the actual numbers do not blindly accept residents hype and fears.

Even if the Algebe way is made emergency access only (an idea which died an early death for a number of reasons including the fire dept objections) and everybody in the new development are forced to go north on the road through the wetlands, most of them will just turn around and go south on Chalmers because that would then be the fastest way to Washtenaw, which will be the destination of 85% of the traffic independent of the Northern access being open or not. They will be frustrated and wondering why the city couldn't find a better way to access Washtenaw which is right next to their development. When they find out that the main reason was that their neighbors in Woodcreek successfully lobbied to completely eliminate all traffic through their neighborhood they will rightly wonder what kind of neighbors they are. Thus the Northern Access only idea would not serve the needs of the South Pond Villages residents well.

In terms of traffic, I thought a few additional actual numbers might help the Planning Commission in making the decision.

According to the traffic study, during morning and afternoon rush hour Washtenaw gets an average of 40 cars/min. East Huron River Dr. gets 13 cars/min. (So its also pretty busy, on a per lane basis its nearly as busy as Washtenaw.) Chalmers sees much less traffic. South of Woodcreek Blvd, Chalmers sees 1 car/ min. North of Woodcreek it sees only 1 car every 4 minutes. This is not a lot of traffic going either way, particularly north.

How much does the development add? It will add about 1 car per minute south of Woodcreek independent of if the northern access is built but only 1 car per every 6 minutes North of Woodcreek, if the northern access is NOT built, (~zero if it is)

Now, 2 cars per minute is not a lot of flow, while it is on Chalmers but people worry this additional southbound traffic will a problem when it hits Washtenaw. For the right turns are not so bad, during rush hours they are forecast by the new traffic study to go from an average of 22 seconds prior to the development to 29 seconds after the development is built. During nonrush hours the development will increase the average wait times about 2 seconds 15.5 to 17.5 sec.

The left turns however are thought to be a real problem, and the Chalmers/ Woodcreek residents have certainly emphasized this a lot. However the *real* data from video monitoring concerning the delay at Chalmers and Washtenaw shows it is nowhere near

as long as modeled in the traffic study and certainly not as long as claimed by the residents. You have to read to page 84 of the traffic study to see it, so I thought it is very possible you may have missed it. The measured delay turning left and right for southbound Chalmers traffic at Washtenaw going both right and left is actually only 16-17 seconds during rush hour! The computer model predicts a substantially longer delay (about 40 seconds increasing to 60 after the development for left turns). It looks like actual people are better at finding a slot in traffic than computers are.

How does the proposed Northern access road through the wetlands affect this flow south? The somewhat surprising answer is not in the slightest. This is made absolutely clear by the traffic study and Planning staff in their summery report agrees. Why? Southbound traffic will continue to go south, while northbound traffic will continue to go north. 85% will continue to go south, after the development is built, as before, because there are simply more desirable destinations South of the development along Washtenaw than to the North, which has the wilderness of South Pond, which is hardly a shopping destination. If the northern access route is built, the load on Chalmers north of woodcreek will increase, but only from one car every 4 minutes to one car every 2 and a half minutes. during rush hour. This is in not in any way heavy traffic. Putting a new road through with all the natural features impacts for a road that in peak periods will handle about one car every 6 minutes and in no way affect the delays at Washtenaw is ridiculous.

How about safety? Isn't it better to have a second road in case one gets blocked? For some vital functions where it is difficult to fix things before disaster strikes, like aircraft controls, redundancy is important for safety. But redundancy is usually wasteful. The new plan by substituting one road for another does not really add much redundancy except in Chalmers N of Woodcreek., which as I have pointed out above sees very very little traffic. One could imagine some disaster blocking this Northbound section of Chalmers but how often has this actually happened in the past in a way that couldn't be readily fixed in a reasonable timescale without loss of human life? I would guess rarely if ever. We could double up all power lines too to avoid power outages but at what cost?

The Woodcreek and Chalmers neighbors may think they support the new site plan because they cling to the hope that Algebe way would be made emergency access only, forcing all the residents of the new neighborhood to go north even though they are likely to want to go south. Historically 85% of the Woodcreek residents have historically chosen to go South to Washtenaw. There is no reason to think that the South Pond Village residents would make any different choices. However fire made it clear that if Algebe way was made emergency only, the northern access route would need to

boulevarded. This would greatly increase impacts to the wetlands and is unlikely to get either state or local approval. The traffic study is based on the idea that Algebe way is open access

City Planning staff does not support the Nov 2015 plan. In a letter dated Nov 25, 2015 to Mr. Covert

<http://etrakit.a2gov.org/etrakit3/viewAttachment.aspx?Group=PROJECT&ActivityNo=SP14-051&key=MK%3a1511300912049503>

They state:

“Planning staff has reviewed the above project for the Third time and has the following comments: 1. Planning staff does not support the plan as presented. While it is acknowledged that the petitioner is attempting to address staff concerns with the current plan, a previous plan approved by city staff demonstrated that the project can be developed while minimizing impacts to natural features.”

In fact this letter in response to the Nov plan is very short and the natural features impacts and the fact that an alternative plan exists that does not have these impacts is the major objection they have to the Nov plan.

More specifically according to the Natural Resources Review:

<http://etrakit.a2gov.org/etrakit3/viewAttachment.aspx?Group=PROJECT&ActivityNo=SP14-051&key=KG%3a1511250118251386>

*“Staff does not support the current plan, more natural features are impacted through this plan, particularly related to woodlands, wetlands, open space (wetland) buffers, and floodplains; and there is a reasonable alternative (access off Chalmers/Clark Road) that would limit the disturbance to the natural features on the site. This site contains all of the natural features regulated by the City of Ann Arbor, woodlands, landmark trees, wetlands, open space buffers, floodplain and steep slopes. The previous site plan, with access off Chalmers/Clark Road, limited natural features disturbance to the minimum necessary for the reasonable use of the property, while protecting the high quality natural features on the north side of the site.”*

It also states:

*“MDEQ/ACE Joint Wetland Permit Application. The statement in the application that the proposed access road to Huron River Drive is “City-required,” and that the alternative off of Chalmers Road is not feasible because City of Ann Arbor Planning Commission did not approve the site plan with this access is not correct. Planning Commission is a recommending body; City Council is the ultimate approving body for this site plan and has not voted on this project yet, therefore, the Chalmers Road alternative is still a feasible and prudent alternative. “*

And:

*“Note: Per Chapter 60, 5:212(3) (Use Permit Standards and Criteria), a City Wetland Use Permit shall not be issued unless the applicant can show either of the following: i. The proposed activity is primarily dependent upon being located in the wetland ii. A feasible and prudent alternative does not exist. Staff would not support the issuance of a City Wetland Use Permit because access there is a viable plan to access the site through the Chalmers/Clark Road and a feasible alternative exists. City Planning Commission not approving the project does not mean this alternative is not feasible. Planning Commission is a recommending body and City Council is the approving body; City Council has not voted on this project.”*

Thus this report makes it absolutely explicit that there exists a viable and feasible alternative plan that would not impact the wetlands.

The Natural Areas Preservation (NAP) reports

<http://etrakit.a2gov.org/etrakit3/viewAttachment.aspx?Group=PROJECT&ActivityNo=SP14-051&key=RG2%3a1511241105028884>

<http://etrakit.a2gov.org/etrakit3/viewAttachment.aspx?Group=PROJECT&ActivityNo=SP14-051&key=RG2%3a1508181135158842>

make similar points and mention explicit potential impacts to rare species:

*“We strongly oppose the construction of an access road from the development north to Huron River Drive. The proposed road would be built very close to areas where rare plant and animal species have been documented, including Euphyes dukesi (Duke’s skipper), which is state-threatened and legally protected, and Carex trichocarpa (Hairy-fruited sedge), which is a species of special concern Michigan. It is likely that construction activities so close to the wetland will have negative impacts on these species and their Natural Area Preservation [NAP@a2gov.org](mailto:NAP@a2gov.org) 3875 E. Huron River Drive Ann Arbor, MI 48104 734.794.6627 City of Ann Arbor Community Services /Parks & Recreation [www.a2gov.org](http://www.a2gov.org) habitats. This area may also potentially serve as habitat for the northern long-eared bat (Myotis septentrionalis), which is federally threatened. A survey should be conducted to assess potential NLEB habitat. In addition, ideal habitat for the Queen snake (Regina septemvittata), another species of special concern in Michigan, occurs in this wetland, and the snake has been documented on the north side of Huron River Drive. It is possible that it may also inhabit the wetlands south of the road, near the floodplain of Mallett’s Creek.”*

In contrast to their opposition to the Nov Plan, city staff,

have signed off on the April plan

<http://etrakit.a2gov.org/etrakit3/viewAttachment.aspx?Group=PROJECT&ActivityNo=SP14-051&key=MG1%3a1504070244080731>

*“STAFF RECOMMENDATION Staff recommends that this petition be approved because it complies with all the applicable local, state, and federal laws, ordinances, standards, and regulations; the development would limit the disturbance of natural features to the minimum necessary to allow a reasonable use of the land; would not cause a public or private nuisance; and would not have a detrimental effect on public health, safety, or welfare.”*

Woodcreek Neighbors have objections to this April plan because it routes traffic through their neighborhood and as a result of this this plan has not been approved planning commission. In addition I note that the Nov plan actually routes more traffic directly through the woodcreek neighborhood because the alternative road in the south west corner of the April plan (the Woodcreek Blvd. extension) which would mostly bypass the woodcreek neighborhood is missing in the Nov plan leaving 85% of the traffic from the development going directly through woodcreek in the Nov plan. Once the Woodcreek Neighbors realize this they will very likely rise up in opposition to the Nov plan.

These sensitive wetlands impacted by the northern access route are the home of at least one critically imperiled species. For these reasons and because the addition of South Pond Way will have absolutely no effect on the development generated southbound traffic on Chalmers I, my over 1200 supporters are strongly opposed to the current site plan with it Northern access route. This area needs to be preserved. City staff are also opposed NAP points out that since other reasonable access routes are available that do not impact the wetlands this road is possibly even illegal. I would ask Planning Commission to listen to their citizens and staff and vote this second site plan down.

Dear Ann Arbor Planning Commission, Matthew J. Kowalski, Ann Arbor City Planner, Scott Servoss, Assistant Vice President Commercial Special Assets Old National Bank, Christopher Taylor, Mayor of Ann Arbor, and Luke Golden, Department of Environmental Quality,

We are pleased to present you with this petition affirming this statement:

**"Permanently preserve all of South Pond Wetlands drainage basin as a nature area and wildlife sanctuary."**

Attached is a list of individuals who have added their names to this petition, as well as additional comments written by the petition signers themselves.

Sincerely,  
James Bardwell

This same old pattern emerges. Ruin a unique area so more people can 'enjoy' it while some fat cat developer massages his ego by building more Monopoly 'hotels'. Ann Arbor, if tyou are reall as greaan as you claim you will put and end to this proposition. Tell Putle to build in Canton where they don't seem to care how ugly overdevelopment makes a living space. Tired of realtors and developers controlling this town.

David Wak  
Ann Arbor, MI 48105  
Jan 14, 2015

---

It should be ILLEGAL for any new developmen that existing water quality and quality species habit with endemic flora/ fauna. New subdivisions do not belong on this parcel of critical wildlife habitat.

Draining this swampy area for construction makes no sense. The chances are that the engineering will not prevent the new structures from flooding due to cost control issues. Wetlands are the most bioactive, productive ecosystems on the planet, and most of them are already gone. Save this one.

E. Daniel Ayres

I arrived in Ann Arbor just a few months ago, but the delightful environment is one of the reasons that brought me here and simply put me in a happy mood every single day when I'm on the road. Nature deserves the most careful protection, for the sake of all the locals, not only people, but all the living creatures around us.

If the proposed development would have a negative impact on the South Pond Wetlands, which is adjacent to the Huron River itself, I would think that this alone would be enough reason to prevent building so close to the nature area.

James Clark  
Ann Arbor, MI 48108

We have a lot of housing in Ann Arbor. We don't have a lot of butterflies. There are many in danger and we all want our children and grandchildren to be able to live in a diverse and healthy place.

Cinda Hocking  
Ann Arbor, MI 48102  
Oct 18, 2014

---

I hope those opposed with look carefully at the documents going to Planning Commission, and find ways in which the petitioner has failed to meet city standards (in the zoning ordinances and regulations of the planning dept.) Planning commission is bound by law and cannot deny a petition unless there is a legal reason to deny it. A denial not based on the ordinances and regulations will be appealed by the petitioner, especially such a deep-pocketed builder. City Council MIGHT deny it even if Planning Commission approves it, but I don't know whether this is a proposal that requires council approval (I think it is, but don't know for sure). My comment is based on ten years' experience on the Ann Arbor City Planning Commission.

Ann Arbor is proudly called Tree Town. It is supposed to be a progressive but environmentally friendly town, with some buses running on alternative energy, and the rain water saving art piece recently installed in town too, and other mindful things for our environment's sake. The wetlands need protecting as well. There are other areas which can be developed instead, saving our natural drains, the wetlands and an imperiled species, the Duke's Skipper butterfly. Show Michigan you are sensitive to the important environmental issues in this state and in Ann Arbor. Permanently preserve all of South Pond Wetland drainage basin.

We gave enough McMansions using excessive amounts of resources and contributing little, if anything, environmentally sound to the surrounding areas. What need are places that put carbon back in the ground and that help to purify water naturally. South Pond currently does this and it should be able to continue to do so in the future.

I'm not a resident of Ann Arbor. However, as a resident of the only known planet in the Universe to harbor a biosphere, I am intimately connected with and dependent upon the health and sustainability of the endangered ecosystem that is threatened by development within and around the South Pond Wetlands drainage basin. It is time to stop the relentless usurpation of Nature for the comfort of the most ecologically destructive species on the planet at the expense of the many other life forms that would be left homeless by such mindless land development for humans.

I believe such a preservation would be in the best interest of Ann Arbor. High quality natural areas are an important component of economically and socially viable communities and actually work hand in hand with good development practices. Please do not make a short-sighted decision, think of Ann Arbor's future quality of life!

This isn't just about a butterfly, though that is a big deal, as range maps show it in severe decline. It is also about protecting a valuable natural area for all the other species of plants and animals that inhabit the area. Southeast Michigan is one of the most highly fragmented regions on the continent when it comes to migration corridors. We must do what we can to protect what is left before it is too late.

Really? As pollinators are imperiled which will hit humans directly at the produce markets, there is a plan to wipe out more natural habitat? Let's ask the developer to move to a run down region or area with infrastructure already existing instead of wiping out more trees, wetlands and harming the environment using them. Have you heard about the decrease of monarchs? This is due to habitat loss and herbicide use; monarch population at 3% of normal.

There has been SO much development in Ann Arbor. Please help save what's left. I'm sure there are places that were once commercial real estate that are presently unrented and could be put to use as residences. For instance, the stalled project at Georgetown. So many offices empty.

I promote urban "infill" within the freeway ring, but this place has prime habitat and biodiversity -- it's not like an urban area with infrastructure to be redeveloped. The proposed residential development is low-density and resource-intensive per capita. It is just miles from a city center, but it is still destructive encroachment and sprawl.
