

Scope of Services

Contractor agrees to provide drainage services to households in the Bryant neighborhood. The specific services to be provided will be determined after a site visit is requested by the City of Ann Arbor project team. Upon completion of a site visit, the contractor will submit a detailed proposal outlining all tasks and associated costs. The City of Ann Arbor project team will review the proposal and determine whether to proceed as outlined, request adjustments, or decline to proceed. It is expected that Contractor's proposals will include items such as: encapsulation, liner insulation, crawl drain work and repair, sump pump work and repair, discharge line work and repair, French drain work and repair, direct sewer discharge drain work, and sewage remediation, among other items. Mold remediation due to drainage issues may also be considered.

No work shall progress until the City of Ann Arbor has executed a Work Statement that both parties have signed.
