

## MEMORANDUM

**TO:** Mayor and City Council

**FROM:** Molly Maciejewski, Public Works Manager

**CC:** Howard S. Lazarus, City Administrator  
Craig Hupy, Public Services Area Administrator

**SUBJECT:** Council Resolution R-18-463 - Information on Water System Materials

**DATE:** December 18, 2018

---

In June 2018, Michigan approved revisions to the Safe Drinking Water Act's Lead and Copper Rule. Among other things, the new Rule requires water systems to identify all publicly- and privately-owned service lines that are or were connected to lead and to have those lines replaced at 5%/year, starting in 2021. Over the last 3 decades, the City proactively removed all known publicly-owned galvanized lines with lead goosenecks. The new Rule now requires the City to have all privately-owned galvanized service lines connected to those City lines removed. To do so, the City needs to complete a preliminary material system inventory by January 1, 2020, which must be verified by January 1, 2025. The City is in the process of reviewing records to complete the preliminary inventory.

Meanwhile, this fall, the City received FOIA request 1636 from Ryan Stanton. That request sought records showing the known locations of (1) lead components removed from the city's water system, and (2) any remaining lead components in the city's water system, as well as locations where the city believes galvanized water service lines may need to be replaced under the revised Lead and Copper Rule. By Resolution No. R-18-463, the City Council directed the City Administrator to compile the information requested in FOIA request 1636 and release it in a timely manner. In lieu of compiling and releasing every responsive record, I have taken the step of preparing, to the best of the City's ability at this time, a summary of the relevant information from those records, a copy of which is provided with this memorandum, which I believe satisfies Council's resolution.

As further explanation, the first tab in the spreadsheet shows locations where lead goosenecks have been removed from the City's water system, and City-owned galvanized service lines have been replaced. The second tab contains locations where lead components are known to still exist in the City's system. The third tab contains information from the City's parcel data. These data include all homes built in the time period when galvanized iron was believed to be used for service lines: before 1927 and 1942-1945. These locations are where galvanized lines that were once connected to lead components may still exist. We have not information about actual private service line materials. Accordingly, the third-tab data may change as we complete the inventories. We will need assistance from homeowners to get this information.
