Subject: Banning Natural Gas is a Great Idea

I want to register strong support for the resolution to ban further implementation of natural gas for all new construction and all renovations. There is general agreement among responsible scientists that electric energy (even given DTE's fossil fuels proportion of their generation portfolio) is twice as clean (in terms of greenhouse gas emissions per unit power output) as natural gas. And moreover, as the grid becomes cleaner, it will be even more so.

Banning natural in these applications will be a great change which will help Ann Arbor meet its climate goals over the next several decades.

I applaud the Commission for its leadership on this issue, and urge the passage of the ban asap.

Very truly yours,

Bradley Aaron, M.S.
