Subject: "COW" at 910 Greene Street...

...we met this afternoon, after 1500 hrs, when the "staff report" on this project became available to the public, with the vendor who supplies us with this type of equipment on our projects...the question asked, is this project of any conceivable benefit to the people of Ann Arbor's welfare, convenience, or necessity?...answer: **NO**...next question asked, is there some reasonable alternative to this project?...answer: **YES**...this project could be located with the other interplanetary communications equipment on the pad provided at the corner of East Keech and South Main Streets, removed from close proximity to residential properties and substantial concentrations of sojourners and passersby who would have no notice of the potential physical (toppling or collapse) or health (seizure disorder sufferers) (carcinogenic risk) dangers...

...if this was a request of ours, our vendor indicates that they would refuse to provide the equipment or service in a similar location...Planning Commission should not approve this project...
