

[DRAFT] Resolution to Approve the Installation of Traffic Calming Devices on Fernwood Avenue (Packard Street to Lorraine Street)

Attached for your consideration is a resolution for the installation of traffic calming devices on Fernwood Avenue (Packard Street to Lorraine Street). The construction is expected to take place during the 2021 construction season by the City of Ann Arbor's contractor for the 2021 Annual Local Street Resurfacing project, and to be paid for from a combination of the FY 2021 (approved in May 2020) and FY2022 (pending approval in May 2021) Traffic Calming Budgets. The traffic calming plan includes two (2) speed tables, one (1) raised intersection, one (1) raised crosswalk, and one (1) median island as shown on the attached final plan.

The residents and property owners of Fernwood Avenue have been polled and support the proposed traffic calming plan (attached) for their neighborhood (based on the level of support required for the program). The Fernwood Avenue (Packard Street to Lorraine Street) traffic calming project began with the residents' petition received in October 2018. After the initial evaluation and completion of the speed study, the traffic calming public meetings were scheduled using the established traffic calming process. The first meeting was held near the study site at Cobblestone Farm on March 5, 2020. The second meeting would typically include walking a portion of the study street. However, amid public health concerns surrounding COVID-19 and the inability to safely hold in-person public meetings, the second meeting was held electronically on June 4, 2020. Materials were mailed to residents in advance, and temporary informational signage was installed at each potential device location.

The adopted program allowed us to send an initial questionnaire to each address in the project area to determine their concerns and location of those concerns, among other information. This information was used to prepare starter concepts for the first meeting. Staff and the residents/property owners discussed neighborhood interests and concerns, worked through a table top exercise with initial concepts, finalizing the concepts to be reviewed at the second meeting. In advance of the second meeting staff shared the revised plan, painted the device locations on the street, and posted informational signage, allowing neighbors to conduct a self-guided tour. At the meeting staff discussed the plan with project area participants and gathered an informal poll of neighborhood preferences.

A final plan was developed, considering feedback from the second meeting. The final plan was mailed to the residents and property owners in the project area. Each household was polled to determine their support, or opposition, for the proposed plan. The project passed the criteria requiring 50% of the responses support the plan.

The results are as follows:

120	No. of valid addresses in project area
22	No. of surveys supporting all or part of the final plan as shown
28	No. of survey responses received
79%*	Percent of surveys received supporting all or part of the plan as shown

*to pass criteria must receive 50% or higher
