Resolution to Adopt the City of Ann Arbor Urban and Community Forest Management Plan
Attached for your consideration is a resolution to adopt the City's first Urban and Community Forest Management Plan. The plan is a culmination of a multi-year public planning process that engaged the community and stakeholders. The Park Advisory Commission and Environmental Commission have passed resolutions in support of the Urban and Community Forest Management Plan on April 15, 2014 and April 24, 2014, respectively.

The final draft of the plan is attached and it can also be viewed on the city website at:

[http://www.a2gov.org/government/publicservices/fieldoperations/forestry/Documents/Urban%](http://www.a2gov.org/government/publicservices/fieldoperations/forestry/Documents/Urban%20Forest%20Management%20Plan.pdf)

Adoption of the plan does not commit City resources. Adoption of the plan would provide policy direction and guidance to staff for future implementation recommendations to City Council. The City Administrator's FY 2015 Recommended Budget anticipated favorable consideration of the final draft.

Ann Arbor's urban and community forest is made up of the trees, shrubs and woody vegetation growing along city streets, in city parks, and on institutional and private property. It is a defining and valued characteristic of the City that residents affectionately call "Tree Town," helping to make it a desirable place to live, work and play.

The City of Ann Arbor has approximately 6,900 trees in mowed areas of city parks and over 41,000 trees growing along city streets. These publicly-managed trees provide over \$4.6 million in benefits to the community each year, including reducing stormwater run-off, improving air and water quality, and beautifying the city. The City has a long history of care and management of the urban and community forest. However, serious challenges over the last decade, like the emerald ash borer, have impacted the City's ability to sustainably care for and manage the urban and community forest, placing the health and condition of the City-managed trees at risk.

In 2011, a planning process was undertaken to develop the City's first Urban and Community Forest Management Plan (UCFMP) to provide a framework to effectively manage the urban and community forest as a sustainable asset, consistent with the values and needs of the community. Through a multi-tiered and comprehensive public engagement process, stakeholders, community leaders, residents, and city staff participated in the development of the UCFMP. Public workshops, on-line surveys, focus groups, A2 Open City Hall, and an Advisory Committee were used to gather input during the planning process. This input helped to identify and focus plan goals and provided a means of vetting ideas, exploring implementation options and establishing priorities among multiple-management activities. The public engagement process was successful in making the UCFMP a community-driven plan that is responsive to the issues, needs and desires of the community.

The overarching goal of the UCFMP is to sustainably protect, preserve, maintain and expand Ann Arbor's tree canopy and urban and community forest. The targets, supporting goals and recommendations outlined in the UCFMP will help to achieve this overarching plan goal, as well as further goals in the City's Sustainability Framework adopted by City Council in February 2013.
